

OFFLINE CHECK IN

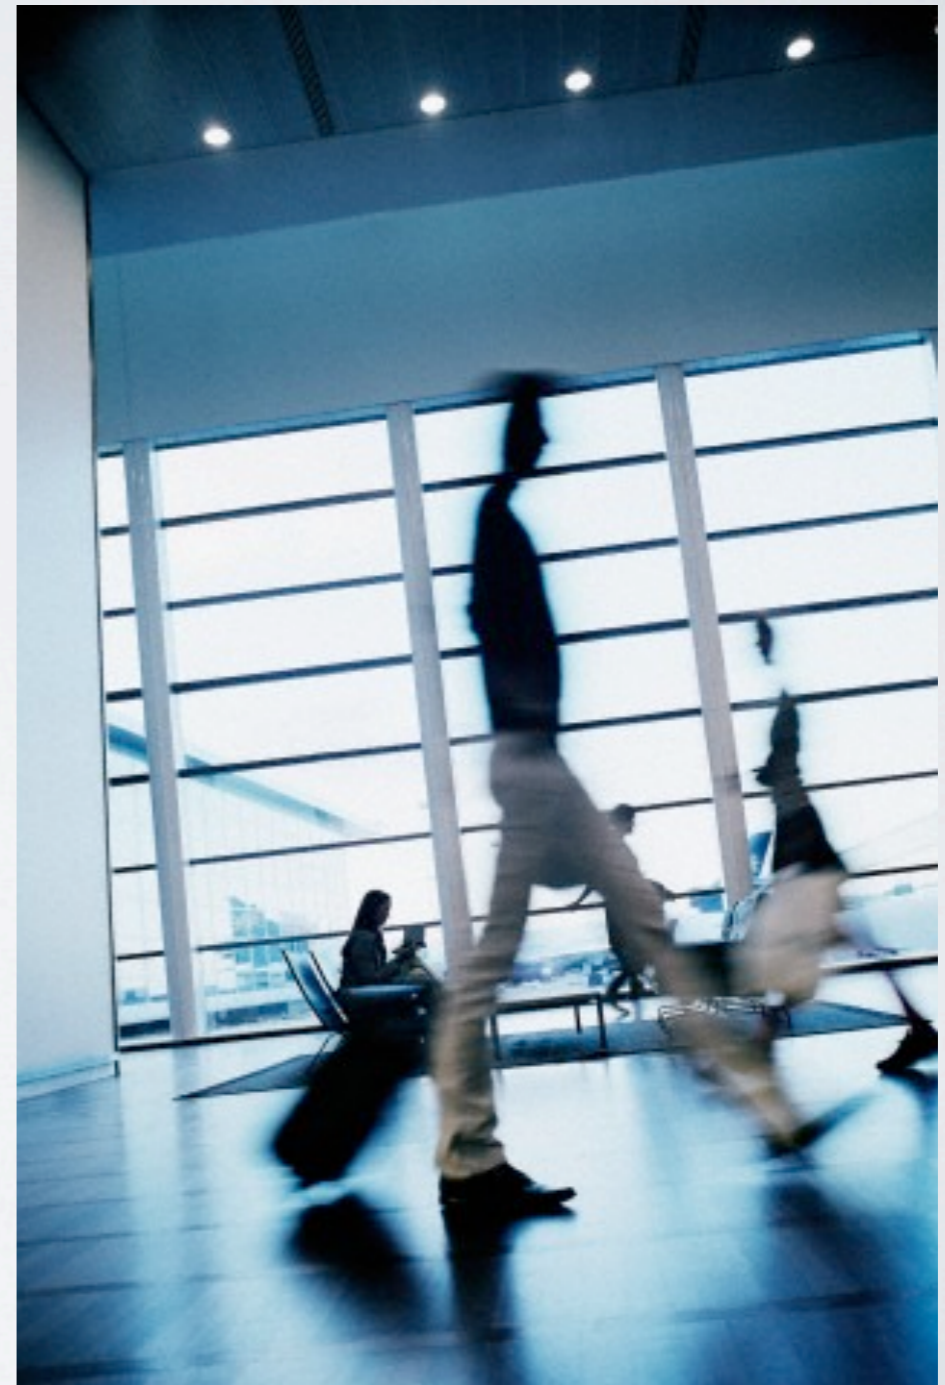

Never go manual again

OFFLINE CHECK IN

- A product developed by Scan Brazil Consulting
- In use by Gol for 5 years and Azul for 3 years
- An incredibly affordable way to prevent airport chaos

GET PASSENGERS LISTS

- The product downloads passengers lists from the ODS
- It stores the lists either in a centralized or a local server at the airport

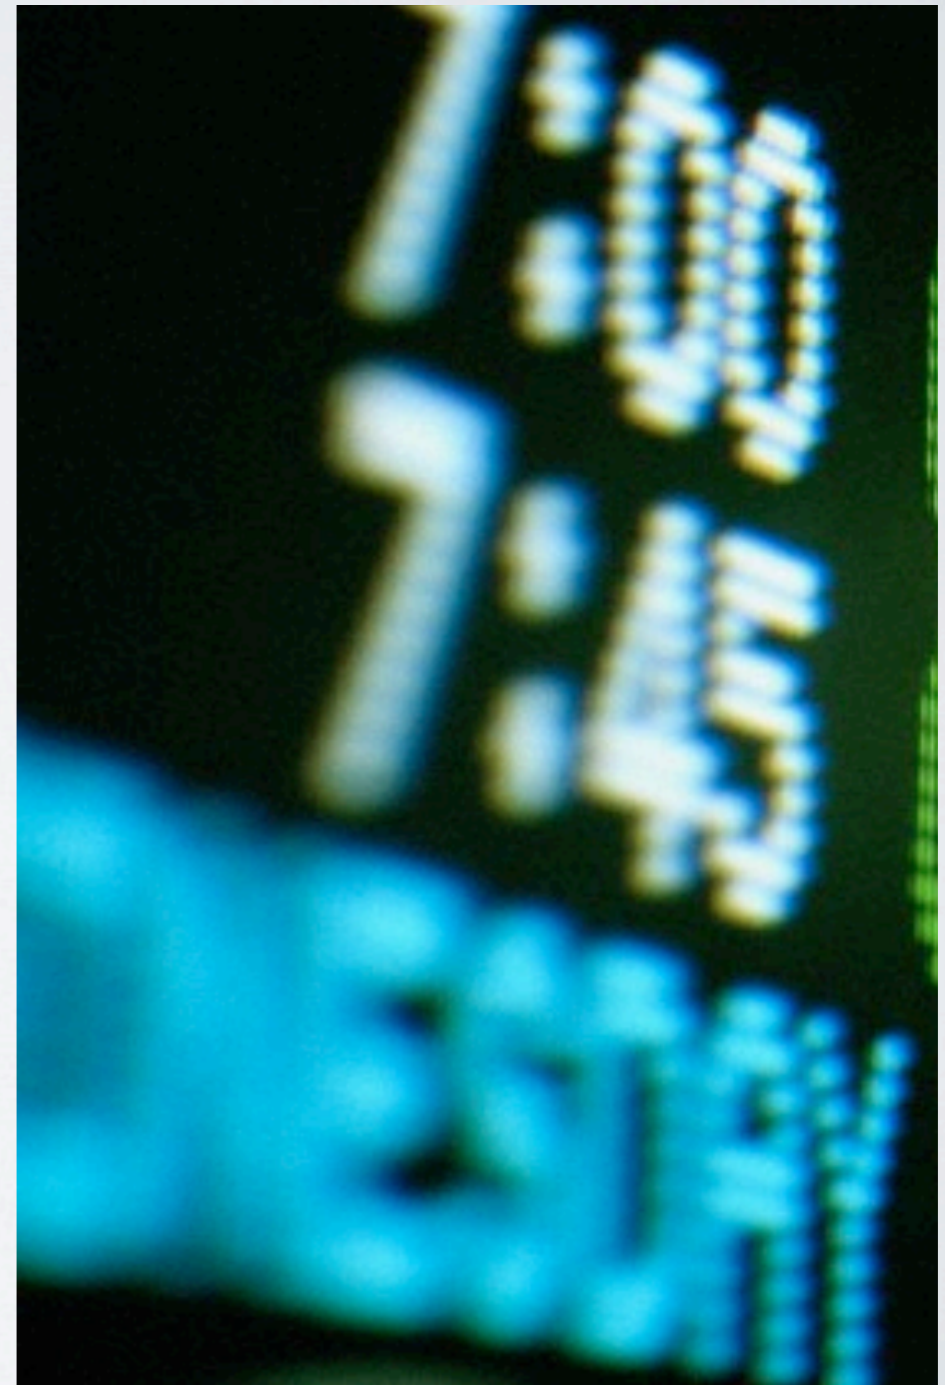

SWITCH TO OFFLINE

- Point SkyPort to the offline server in case of a system or communication outage
- And go fully automated in offline mode

DO CHECK INS AND BOARDINGS

- The offline server responds to the same SkyPort entries
- Agents seamlessly do check ins printing boarding passes and bag tags
- They also work seamlessly at the gates

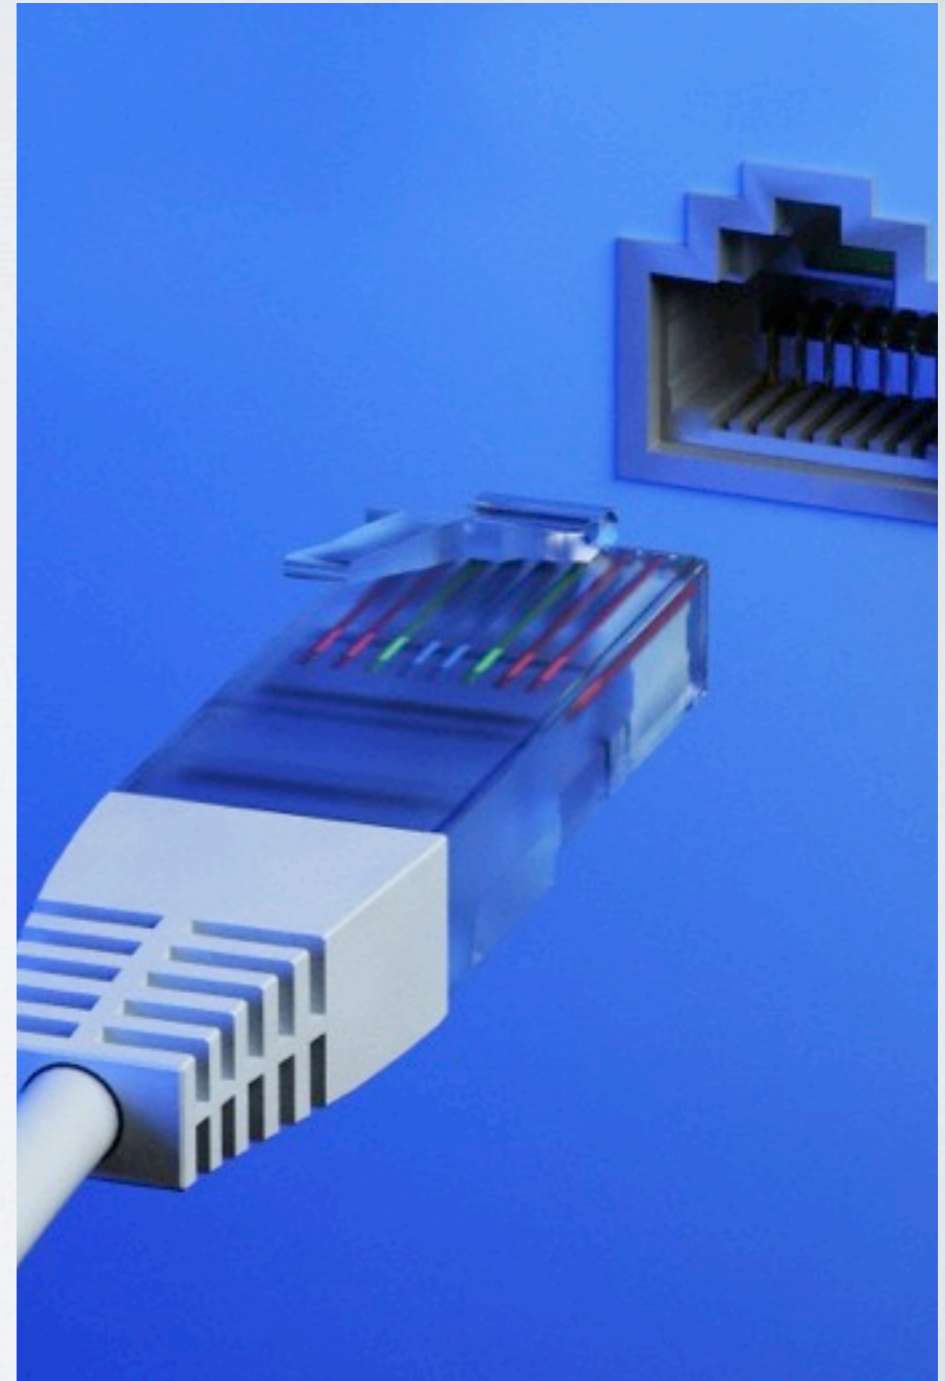

ENJOY RICH FUNCTIONALITY

- You can have pretty much all the online functionality
- It includes connecting flights and full bag tag functionality

RESUME ONLINE

- The product automatically uploads the offline check ins and boardings when the system or the communication is restored
- It uploads the data in bulks using a NewSkies API

BUSINESS MODEL

- Monthly fee per site
- No setup fee

GIVE IT A TRY

- Try the offline product with your own data
- Download a passenger list and switch your SkyPort to a demo offline server
- Do check ins and boardings, print boarding passes and bag tags
